

## *American Treasury*

The American Treasury is a private foundation for the preservation of culture, use, and trade in gemstones worldwide. Generational wealth for thousands of years have been passed down in North America including all surrounding countries, steeped in trade since time of antiquity. Artifacts as well as prevalent living archives are in current use and quietly exist just as they have, since the Beginning. Natural combinations of nature's elements are Earth's sacraments held as precious and revered across every continent. Today we are a central repository benchmarking standards for natural colored stone. Curators to physical archive for education and distribution globally.
